

ALASKA AIRLINES

COMMON TURBOJET ROUTES - SITKA

The following depiction of VFR routings are the preferred routes for turbojet aircraft. Normal VFR rules apply and aircraft are free to deviate from these routes in order to safely comply with FARs and good operating practices. The altitudes depicted are approximate altitudes for arriving aircraft. Except where VFR enroute altitudes are shown for short trips between two closely located airports, departing aircraft are climbing at high rates along depicted departure paths to high enroute altitudes.

Note: These routes are used during clear or nearly clear meteorological conditions. When broken or overcast conditions exist, large aircraft use terminal approach routes.
